

Wolf Game Overview & Content

Presented by iSpartan for the [Wolfgame.Community Website](https://www.wolfgame.community)

Wolf Game

— — —

An Ethereum-based, play-to-earn (P2E) game launched entirely on the blockchain in Q4 2021 with new, innovative mechanics. The Full-feature game & blockchain economy is scheduled for release in Q1/Q2 2022.

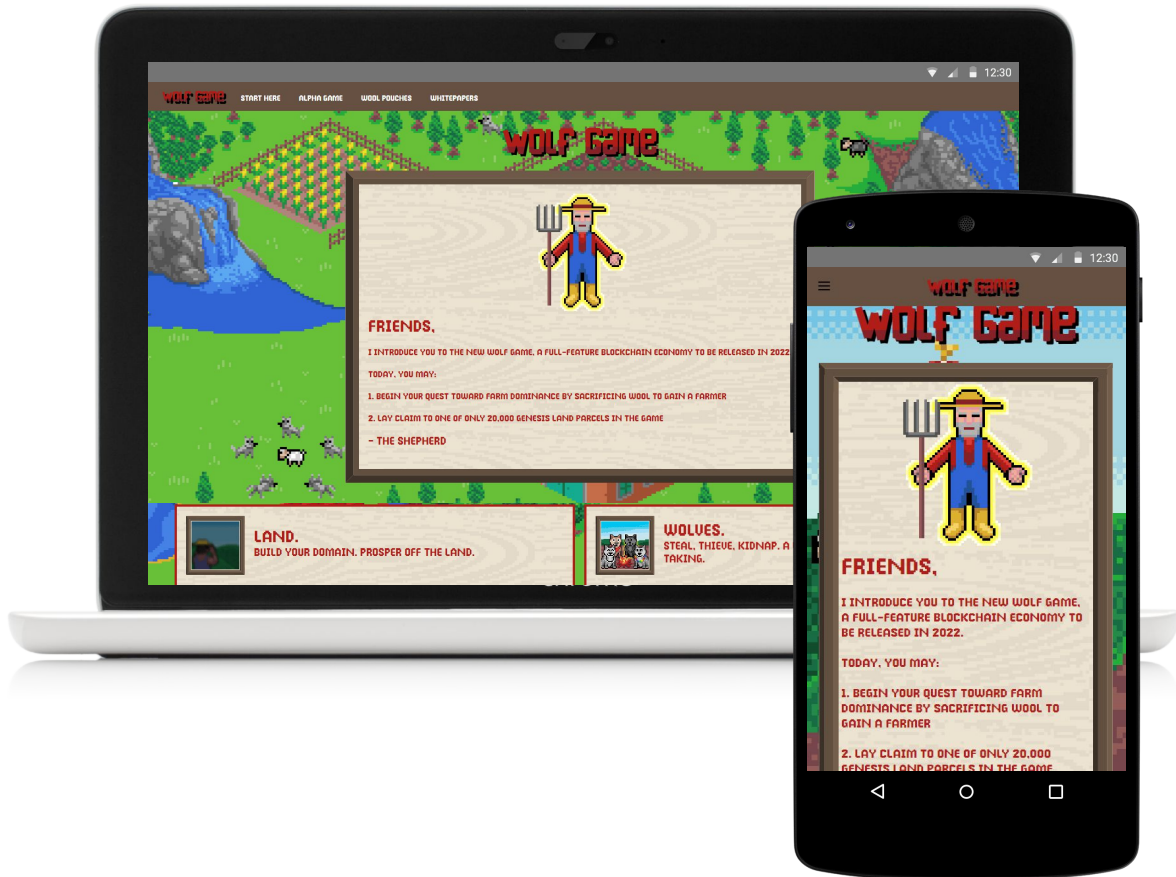

Website: <https://wolf.game/>

Twitter: [@wolfdotgame](https://twitter.com/wolfdotgame)

Discord: discord.gg/wolfgame

V1 Launch Date: Nov 18th, 2021

Full Launch: March/April 2022*

Overview

On a little farm in the metaverse, something special was launched in November 2021. Wolf Game is an innovative P2E game built entirely on-chain (Ethereum). Launched through a stealth mint, a strong community quickly grew after seeing the team deliver novel game mechanics that integrated game theory with risks & rewards. In the first 100 days since launch, the project has continued to evolve and keep the community engaged through multiple phases. The WG team has responded well to all the bumps in the road, and has continued to deliver innovative code and concepts each step of the way. The best part: we're just getting started with Full Game on the horizon... **Welcome to Wolf Game.**

Project Strengths

1

The Team Delivers: Shep and the WG development team have continued to write innovative code, create unique game mechanics and think of novel concepts to keep the community engaged through ups-and-downs.

2

Tight Community: The Wolf Game community is strong. It includes several big names in the NFT space, as well as builders and creators. The engagement and participation of the community is very unique.

3

Deflationary Tokenomics of WOOL: The Wolf Game team has a strong background in economics and has created the WOOL token to be deflationary. They've also aligned incentives by being paid in WOOL themselves.

4

Originality & Innovation: Wolf Game is a pioneer in the NFT world. They've showed the ability to think outside-the-box and pivot when needed. While other projects have copied parts of their concept, none have been able to keep up with how quickly WG moves.

A Deeper Look Into the Barn

A brief history of Wolf Game, phases of the game and the NFT tokens that make up the on-chain economy

Wolf Game Timeline

Wolf Game v1 Launch

10,000 Gen 0 Wolves and Sheep were minted with ETH. Players could stake their Wolves and Sheep in the Barn to accumulate WOOL: shearing a Sheep required paying a WOOL tax to the Wolves.

With WOOL, players minted the 3,809 Gen 1 Wolves and Sheep. Each of these Gen 1 animals had a 10% chance of being stolen by one of the Wolves.

Alpha Game

Originally called "Interim Game", the 14 Alpha Wolves in the game lead Packs of staked Wolves and Sheep in the quest for WOOL: the Alphas each set out to Attack opposing Packs, while Fortifying their own.

The better their planning, strategy, and execution, the more WOOL they and their Pack will win along the way.

The Future

The Shepherd and team have already committed to have their WOOL unlock over the next 4 years. They've been playing chess since day 1, do you really think they don't have a plan for 2026?

Risky Game

Upon leaving the Barn, the Sheep were approached by the Wolves with an offer to play a game for WOOL.

Those who chose the Yes Risk option had a 50% chance of winning a large WOOL Pouch; those who chose the No Risk option had a 100% chance of winning a small WOOL Pouch.

Wolf Game v2: "Full Game"

Version 2 of Wolf Game is currently in development. While lots of clues have been dropped, what we currently know is land and farmers will be introduced.

NFTs (Token Types)

Wolf Game consists of 5 different NFTs (ERC-751 tokens) related to gameplay, 3 of which have been revealed and 2 which are currently unrevealed. Relics are 1/1 art from various phases of Wolf Game.

- 01 | Wolves
- 02 | Sheep
- 03 | Wool Pouches (ERC-751 NFT token that emits ERC-20 tokens)
- 04 | Land (unrevealed)
- 05 | Farmers (unrevealed)
- 06 | Relics (1/1 NFTs purchased via live auction, not part of the game)

Analysis

What makes Wolf Game
so special?

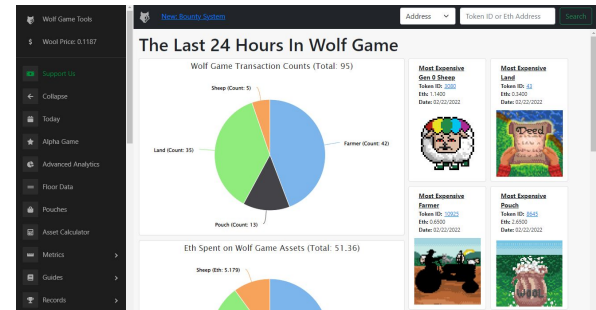

Key Innovations & Novel Code

1. Game played entirely on the blockchain (never-before-seen on-chain mechanics)
2. Ability for NFTs to steal other NFTs: Wolves had a 10% chance to “steal” Gen1 animals minted with WOOL
3. NFTs can “tax” other NFTs: Wolves have been able to take a cut of sheep earnings in V1 and Risky Game, as well as earn a bigger % in Alpha Game
4. Ability to mint and stake your NFTs in a single transaction
5. Gamified staking: stake WOOL, Sheep or Wolves to earn higher rewards
6. Wool Pouches: an NFT (ERC-751 token) that emits ERC-20 tokens (WOOL)
 - a. Technically impressive + a smart economic method to deliver promised rewards to the community without flooding the market with too many WOOL tokens
7. Deflationary mechanics to continually decrease the WOOL supply through gameplay
8. Strategic decisions that push the limits of game theory
9. Live auctions to bid and purchase 1/1 Relic NFTs, hosted by community member Farmer Ron and The Auctioneer (an auctioneer IRL).

Active Community of Builders & Creators

The Wolf Game community has already built & released a number of impressive tools to help each other and support the game.

- 01 | Wolfgame.live [<https://wolfgame.live/>] - Market snapshot of all WG asset types in a single screen
- 02 | Wolfgame Tools [<https://www.wolfgame.tools/>] - Suite of Wolf Game analytics tools
- 03 | Wolf Game Community Website [<https://wolfgame.community/>] - WG info & resources for the Community, by the Community
- 04 | Wolf Game "Farmer's Almanac" [[Google Doc](#)] - WG Knowledge + FAQ
- 05 | Wolf Game PFP Creator [<https://wolfgame.xyz/>] - Wolf Game PFF generator
- 06 | WG Market (beta) [<https://wg.market/>] - Buy/sell WG assets using WOOL
- 06 | Wolf Game Community Website [Coming soon...] - WG Community Resources
